

Medication ordering time reduced 93%

“I am sure we can reduce our ordering time even further. This system saves time and money.”

An improvement event at Wolseley Memorial Integrated Care Centre has reduced the amount of time staff needs to order medications by 93% (from 2.5 hours to 10 minutes every two weeks). Staff grouped similar items together, set regular ordering amounts and posted those amounts on the medication bins to improve ordering practices. Nurses now use a cart to deliver patient medications which has reduced the amount of unnecessary walking by 100% (from 18 feet per patient to 0).
